

**INTERNAL SHADING
PACKAGE**

KAYDEESAYFA.CO.UK

HIGH QUALITY INTERNAL SHADING SOLUTIONS

Internal shading solutions, typically refers to blind and curtain systems, are an integral feature in the majority of large scale commercial builds and renovation projects in the UK.

Shading solutions occupants with privacy and control over light, window blinds can also help buildings meet efficiency and environmental targets. Combined with the right fabric selection, blinds can help reduce solar gain and unwanted glare.

SURVEY

SOURCING

INSTALL

KaydeeSayfa have over 35 years experience in the surveying, sourcing, and installation of blinds, curtains, and skylights for commercial projects.

Our experienced team are equipped with a robust supply chain capable of matching any building specification. As well as a nationwide installation team adept at carrying out complex installations to a high standard.

SOURCE, DESIGN, SURVEY AND INSTALLATION

DELIVERING ON TIME, ON BUDGET

END TO END PROJECT MANAGEMENT

35

35+ YEARS EXPERIENCE IN COMMERCIAL PROJECTS

"Your guys did a great job today – the blinds look wonderful and to be honest the whole process from quote to fit has been a pleasure. Given that I have dealt with many trades during this fit out, this is the only email of thanks I have sent."

SURVEY

Our dedicated survey team conducts on-site visits to gather precise dimensions and quantities, feeding this crucial data to our sourcing and installation teams. This ensures greater accuracy in subsequent phases, minimising snags and potential installation hurdles.

SOURCE

Our procurement team call upon an extensive network of local and global suppliers to offer competitive rates for specified systems, ensuring our customers receive the best value and quality shading solutions that meet project specifications and matching Value Engineered (VE) options.

INSTALL

Our experienced installation teams, led by an SSSTS-qualified team leader, ensure fast, high-quality, and snag-free delivery. A dedicated Project Manager oversees the work using multi-phase software for progress tracking and reporting.

COMMISSIONING

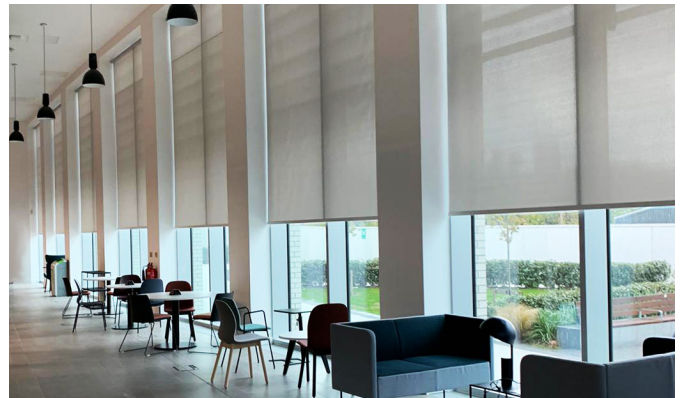

After installing electrically controlled shading systems like RTSs and BMSs, our team fully configures them to the opening's dimensions. This maximises light and heat exclusion, ensuring complete functionality before handover.

WINDOW BLIND SOLUTIONS

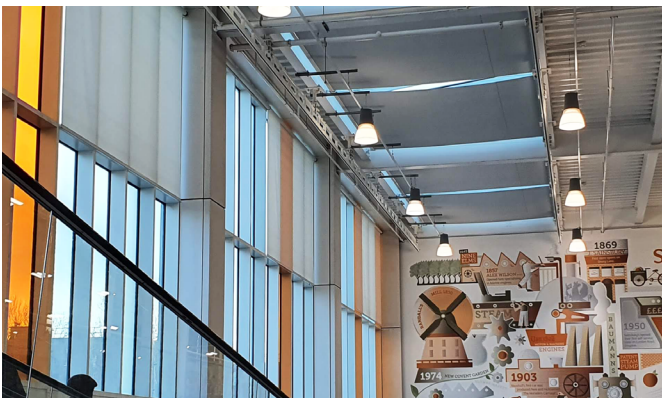

ROLLER BLINDS

Simple to operate and durable, roller blinds are the most common form of internal shading. This system offers a flexible solution suitable for a variety of applications including offices, residential units, and schools. Roller Blinds are compatible with a range of fabrics with manual, crank or electric operation.

SKYLIGHT BLINDS

Skylight blinds use a fabric tensioning system and guide wires to provide shading on horizontal or angled windows. Skylights blinds are commonly used in showrooms, offices and hotels. Skylight blinds are usually electrically operated but manual options are available.

VERTICAL BLINDS

Vertical blinds consist of a series of vertical fabric louvres or slats along a track, that can be rotated to allow the required amount of light entering the room. Vertical blinds give the user greater control over the light entering the room. Vertical blinds can be combined with a range of fabric options.

CURTAINS

Curtains and tracks are a popular shading choice for luxury apartments, hotels and a functional privacy solution in hospitals and care settings. Other than providing privacy and control over light, curtains can also help buildings meet efficiency and environmental targets through thermal regulation.

RECENT PROJECTS BY KAYDEESAYFA

Belmont School, Durham

Contributing to a £37m school development in Durham, KaydeeSayfa supplied and installed over +220 systems including manual dim-out blinds, crank-operated blackout blinds, and motorised blackout skylights.

£40,000
