FALLSECURE™ TRACK
FALL PROTECTION SYSTEM

FALL RESTRAINT AND FALL ARREST TRACK SYSTEM

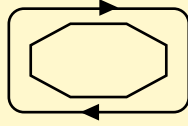

The FallSecure™ Track is an innovative fall restraint and arrest system that allows the users continuous access across the building roof.

FallSecure™ Track is a low maintenance and low visual impact system, that can be mounted to the floor, parapet or louvres giving safe access for maintenance across the roof.

Suitable for 3 users per system, the track system is ideal where space is limited and creates a less cluttered and safer roof area.

PRODUCT INFORMATION

The FallSecure™ Track is a hi-tensile aluminium track that provides fall arrest and fall restraint at height.

Part of the FallSecure™ range of products by Sayfa Group, FallSecure™ focuses on fall arrest and fall restraint solutions, including temporary, mobile and permanent systems.

The track uses a traveller with 6 stainless steel bearings which allow the users to easily walk across the area.

FallSecure™ track is typically supplied in 3m, 4m, and 6m sections or made to order based on the project requirements.

FallSecure™ Track has a range of fixing options, it can be side fixed, top fixed or floor fixed fixed to a substrate, such as steel, concrete or plant / louvre screens.

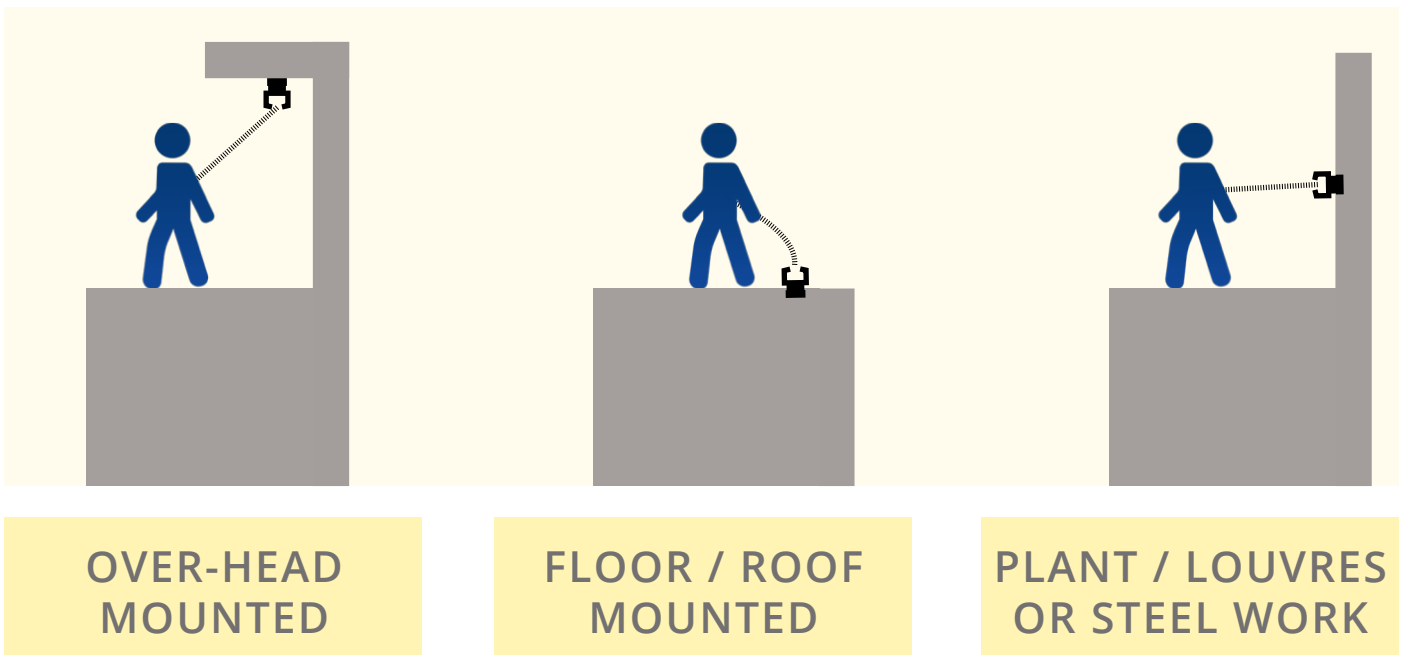

The fall arrest system has low visual impact and can be easily integrated. It's low profile and fixing options reduces risk by creating a less cluttered

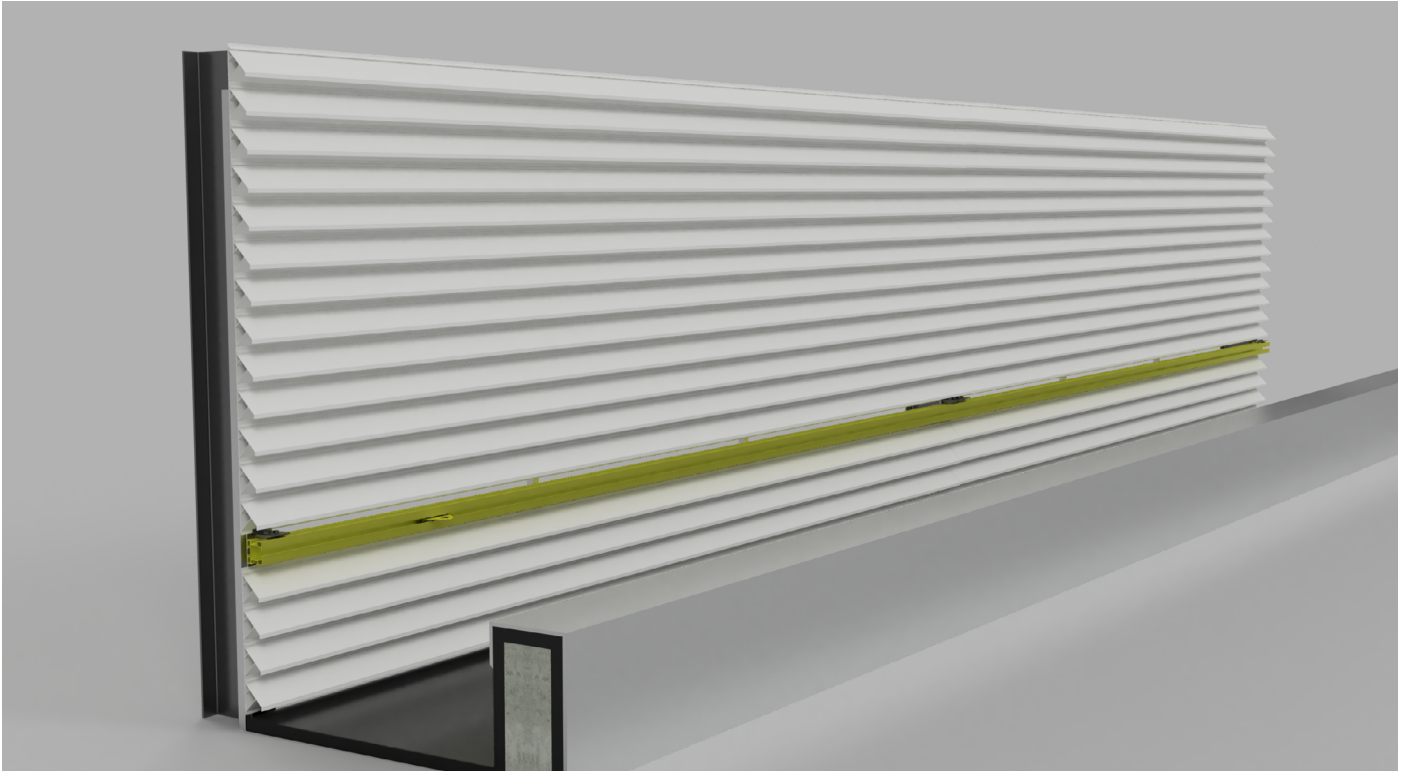

roof area, creating a safer space for maintenance and accessing areas on the roof.

Product is used in shopping centres, hotels, high-rise office buildings, and maintenance of warehouses and hangars, inside and out.

The FallSecure™ Track is part of a family of fall protection and abseil products that can integrate together to create a complete height safety and facade access solution.

APPLICATIONS

“We’ve designed the system based on feedback from consultants, installers and end users - the FallSecure track is an alternative solution that is easier to integrate for installers and simpler for the end user”

Tarun Prema - Product Designer

DESIGN & INSPECTION

It is a legal requirement for fall protection systems and accessories to be regularly inspected and maintained.

This must be performed by a certified and competent individual at least once every 12 months or sooner if subject to extreme conditions such as heavy use or harsh weather.

A list of approved retest partners is available on the Sayfa Group website. These partners are able to provide regular maintenance and safety retests for FallSecure™ carried out in line with the manufacturers recommended guidelines.

Our partners will help keep you compliant with

detailed reporting and testing according to safety regulations.

Sayfa Group products are independently tested and compliant to all current standards.

For more information on design and inspection / testing of products get in touch.
